

Expertise, design and functionality

Bimos at Orgatec 2016

As a specialist for industrial and laboratory chairs, Bimos was the centre of attention at the office furniture trade fair, impressing visitors with its technical expertise in production, laboratory, ESD, clean room and standing work

And Bimos is setting new benchmarks for the laboratory world in terms of both practicality and appearance. Bimos presented its new product innovation Labsit, a work chair optimally suited to laboratories and easy to operate.

The flex function in the back and front edge of the Labsit allows automatic adjustment, great freedom of movement and sufficient support when working as well. Our visitors were also impressed by the diverse range of uses, including as furniture in pharmaceutical and bio-technology institutes, university classrooms and also for ESD, research and production work areas. This broad spectrum is also facilitated by joint-free workmanship, absence of harmful substances, chemical resistance and disinfectability. Available in a choice of colours, the Labsit is simply a clever and modern seat solution.

Bimos skilfully demonstrated how intelligent design can be harmonised with solid functionality. The high number of visitors to the stand is further confirmation that this combination draws interest from all target groups.

Bimos, the chair specialist for the industrial and laboratory world, integrated perfectly into the office furniture trade fair overall. This is because colour, quality and solid functionality are characteristics that are able to convince even an interdisciplinary audience.
